Mrs. Stacey Ferranti
mongoDB
229 W 43rd Street
5th floor
New York, NY 10036

Dear Mrs. Ferranti,

I am writing in response to a job listing advertised on InternSupply.com for a position at mongoDB as a software engineering intern in the New York City branch.

Throughout my education, I have become proficient in various high-level programming languages such as C, Java, and MySQL as well as low-level programming languages like MIPS instruction set and have designed extensive projects based around these languages. I am also in the process of learning other languages such as Python and Prolog. Moreover, I have programming experience in web design and technologies such as HTML, CSS, and JavaScript.

Besides proficiency in various programming languages, I am also well-versed in various programming techniques and algorithms due to my experience as an undergraduate teaching assistant. As an undergraduate teaching assistant for both introductory and advanced object-oriented programming courses, I was responsible for reinforcing basic programming concepts such as polymorphism, encapsulation, and recursion. As for the advanced programming courses, concepts such as unit testing, multi-threading, as well as selecting the proper data structures and algorithms, helped students design a specified product.

I would highly appreciate the opportunity for an interview. I am excited to learn more about the opportunities and grow as a software engineer under mongoDB, while also showing my knowledge as a possible intern at mongoDB. I can be reached anytime through both my cell phone, 123-456-7890 or by email, garry.huang@stonybrook.edu

Thank you for your time and consideration.

Sincerely,

Garry Huang
